Div. of Oil, Gas & Mining

Leslie,

SITLA has no surface ownership in any of the described properties and has no objections to leaving any of the roads open. The open roads may in fact facilitate future development of the minerals estate owned by SITLA in said Section 2. Thank you for the opportunity to comment.

John - The Operator of permit M0450024 is in the final phase of the reclamation of the permit site. The site is within Section 2, which a SITLA section with private surface. The demo is complete and final grade should be done in the next couple of weeks. As per discussed by phone, I would like to leave 2 access roads open to BLM and SITLA ground. The actual process plant will be regraded, but the operator will leave open 2 roads for access:

1. A road would connect the section 3 road around the south side of the disturbance and connect to the section 35 road
2. A second road would connect the above road down to section 1 (this road is already existing)

A map can be found at the following
